

“ According to the New England Aquarium and the Monterey Bay Aquarium, rope-grown mussel aquaculture, strikes a [perfect balance](#) for the health and well-being of our planet. Mussels are one of the [best choices](#) for seafood today.

Mussels filter tiny plankton out of the water for their food, so they need [no supplemental feeding](#). Unlike some forms of fish farming, mussels are not raised in crowded pens and do not rely on the farmer to feed them. [They get all their nourishment naturally](#), from the pristine ocean waters that surround them while they grow. In return, [they improve the water quality as they clear the water of excess plankton](#). Mussels must come from non-polluted water when farmed for human consumption. The Canadian Fisheries Department tests the waters on a daily basis to ensure the coastal waters are clean and free of any toxins.

Canadian Cove mussels are raised on ropes suspended off the sea floor, and are harvested to the surface by boats; [no dragging or scaring](#) of the sea bottom occurs.”

Canadian Cove mussels are a [sustainable shellfish option](#) and have been ranked as a GREEN ([Recommended Best Choice](#)) by Sea Choice

Atlantic Aqua Farms Introduces the first 100% recyclable mussel pack. Our farmed raised mussels rank among the most sustainable aquaculture products available. Now we have an environmentally friendly delivery system which also enhances mussel shelf-life. Our master case is not wax impregnated. It is made from corrugated material treated with 100% recyclable coatings which are waterproof. Inside the master case sits a false bottom made out of virgin polypropylene also 100% recyclable. This false bottom allows the mussels to sit above any drainage and ice melt extending shelf life. This pack is ideal for warehouse customers requiring dry freight packaging, and ideal for any customer who wants the leading packaging for sustainability and the environment.
